#### Update on Programming Curriculum and Labs – Christina Titus

I receive updates for the Programming BILT team regarding the Programming curriculum and programming labs. All programming curriculum created under the NISGTC grant will be uploaded on Nter. A final course is in review. Some of the programming labs had to be re-written. All of the labs will be posted on the virtual lab system.

Thank you for serving on the Programming BILT team. Ann will request for some of you to participate on the Networking BILT team, since networking and mobile are starting to blend together. I have noticed this even more with GIS.

#### Response to update:

Matt: It is fascinating how IT is starting to blend in the convergence of technology, which you started so many years ago. Mobile and GIS are intimately connected because everyone wants to know exactly what your location to offer the right commercial at the right time.

Christina: I enjoy listening to the BILT meeting to witness the changes in the information technology industry.

#### Conclusion – Christina Titus

I hoped that leaders of the Programming BILT team would have joined the call to offer any personal feedback advice, but I believe that it is. Thank you for your participation. I hope you enjoy the rest of your day.
